

ARTHUR HOLM

Find the Serial Number (SN) of your unit

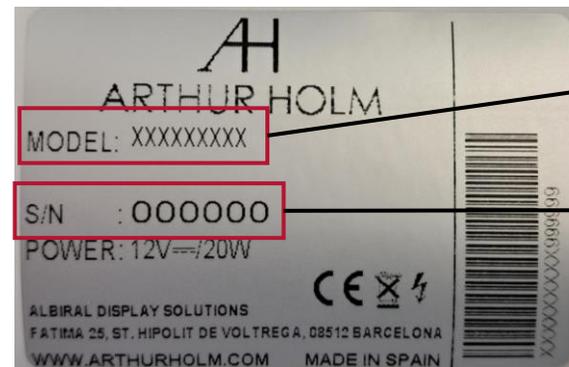

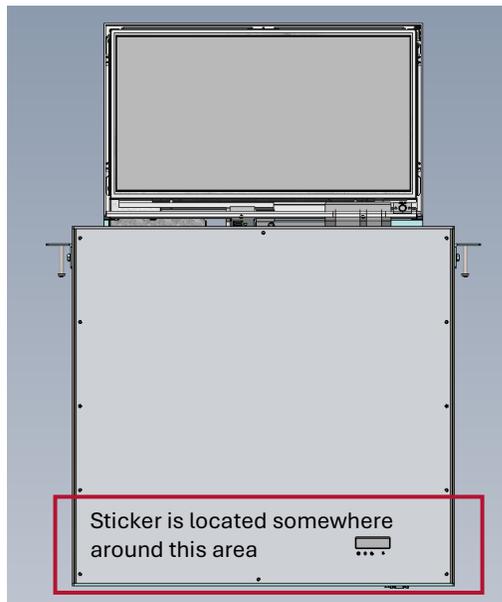

Serial Number

The Serial Number is very important when you need support and assistance from Arthur Holm. The Serial Number allows us to know the information of your unit, including when it was manufactured, the components included, and the 3D design.

Find the Serial Number (OPTION 1)

You can always find the Serial Number in a sticker on your unit. The sticker is usually at the bottom of the unit, on the metal cover or chassis. The sticker will look very similar to the picture below and has different information shown. For us the most relevant is the serial number.

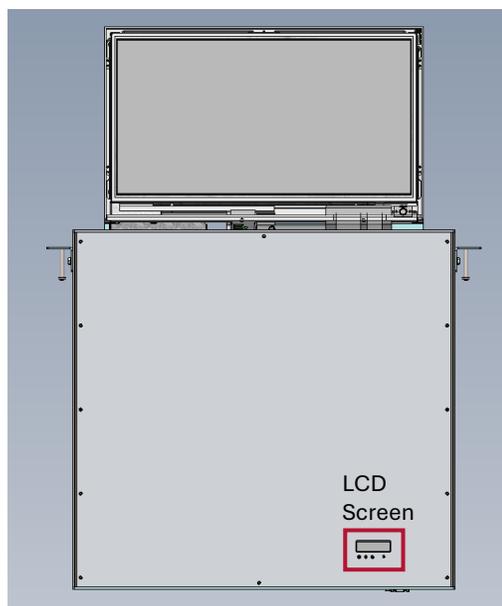

Model Name

Serial Number

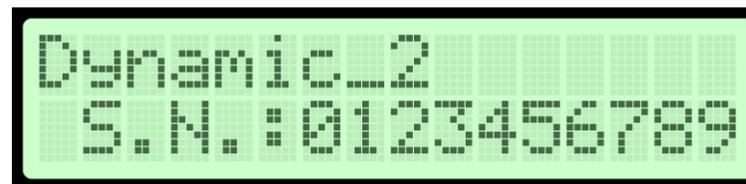

Find the Serial Number (OPTION 2)

If your unit has an LCD Screen you can see the serial number when you power up the unit, or in a screen on the menu where it is displayed. To find the SN screen, press (v) down button until you find the screen.

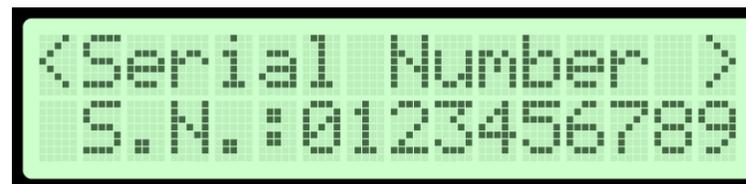

Down
Button
(v)

Screen found on the menu pressing
down (v)

Find the Serial Number (OPTION 3)

This is an alternative way, as not all the units have AHlink available.

With AHlink you can connect via Bluetooth to the device and find the serial number. You need to know the sequence set of buttons necessary to activate it (refer to the user guide). Once activated, on the AHlink app, connect to the device and find the serial number:
